### Cyberattack hits Children's Hospital

May be the work  
of group opposing  
teen's treatment

By Michael B. Farrell  
and Patricia Wen

GLOBE STAFF

The infamous computer hacker network known as Anonymous threatened to attack Boston Children's Hospital over the child custody case involving Justina Pelletier last month, just a few weeks before the medical center's website was subjected to numerous cyber-assaults.

The anti-authority members of Anonymous sometimes appear in Guy Fawkes masks.

Anonymous has made its interest in the case clear. Several weeks ago, the group claimed responsibility for an attack on the website of Wayside Youth and Family Support Network, the Framingham residential facility where 15-year-old Justina has been living since January under state custody.

After the more recent attack on Children's, some patients and medical personnel could not use their online accounts to check appointments, test results, and other case information after the hospital shut down those Web pages.

The threats from Anonymous are the latest to emerge against

# 5 Day Downtime 2015

March 20 at 1:05 p.m. until March 25 at 8:52 a.m.

**All CHAMPS systems impacted**

Systems returned  
for a 12-hour  
period beginning  
approximately  
March 20 at 9  
p.m. until March  
21 at 9:15 a.m.

# Impacts beyond the EHR

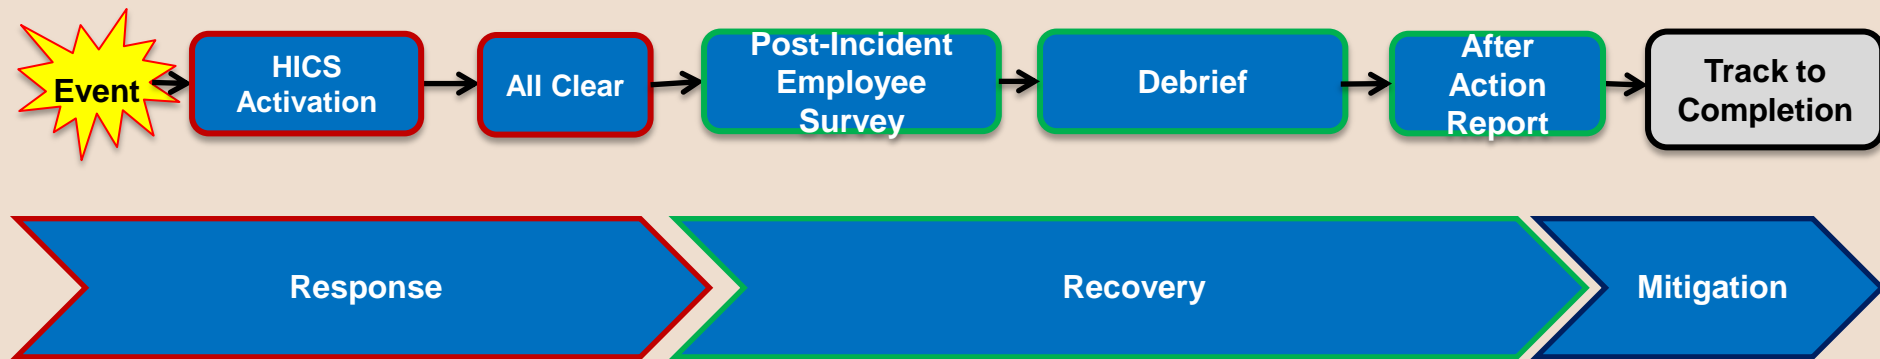

- Paging and communication systems
- Online drug formulary
- Custom applications
- Policies & Procedures
- Web-based clinical resources
- Research databases/registries
- Patient food ordering
- Lab instrument interfaces

Not all downtimes are created equal. EHR, Network, and single application downtimes have different impacts to the institution.

# Capturing lessons learned: The Emergency Management Process

After Action Reports are created after a Hospital Incident Command System (HICS) activation. All Action Items are prioritized and assigned a responsible party and an Emergency Management staff member to track to completion.

# We had some experiences...

## So what did we learn?

Lessons  
learned

- Hospital Incident Command System
- Resources/Assets
- Staff
- Communication

# Lessons Learned: Hospital Incident Command System

## Themes:

- Inadequate departmental downtime plans
- Training needed for HICS positions for downtime roles
- Further understanding of impacted systems and integration of systems for decision making purposes
- Need for Recovery Roles

# Downtime Planning

Plans created for the following areas:

- Inpatient Units
- Lab
- Pharmacy
- Radiology
- Ambulatory Areas
- Nutrition
- Food Services
- Physical Therapy
- Satellite locations
- Social Work

# Successful planning tips

- Ensure departmental buy-in
- Flexible planning options (checklist)
- Ensure a sustainability plan
  - Use during planned downtimes

# Incident Command Training

- HICS Training and Role Clarification
  - Nursing Administrator on Call
  - Informatics Fellows
  - Network liaisons
  - Recovery positions and responsibilities

# Establishing Command and Control

Clinical Education and Informatics created multiple tools to help inform response decision making.

Tools inform response decision making.

# Systems Integration Information

The following systems may be impacted if the hospital disconnects Internet connection. Systems marked **RED** are currently down. (This is not a comprehensive list)

**NOTE:** For ALL other systems that are not listed below (i.e. CHAVMS), follow standard downtime procedures

Application	Application Description	Current Status	Role	Responsible Department	Hosted internally or externally?	Severity	If AFFECTED- Short Term Contingency	If AFFECTED- Long Term Contingency
PPOC Clinical Works		Unaffected					VPN access, based on IP)	PPOC practices in process of making long term contir
ePrescribe		Unaffected					Print prescriptions	Print prescriptions
Extend Paging System		Unaffected					Call operator for direct page	Call operator for direct page
VPN Remote Login		Unaffected					For critical issues, on site access required. External coders, ED schedules, labs and	siloh access will be provided
Life Image		Unaffected					Patient will need to bring in CDs of films/radiology reports. Automatic reports	Patient will need to bring in CDs of films/radiology r
Teleradiology systems		Unaffected					None- Verbal Communications	None- Verbal Communications
NH-N- Patient Eligibility and		Unaffected					Billing and remittals suspended short term	Billing and remittals managed by previous paper pro
MyChildren's Patient Portal		Down					Email the mychildrens helpdesk for needed information, landing page activated, landing	Email the mychildrens helpdesk for needed informa
MyPatients Provider Portal		Down					message activated	Contact individual department
Lexi Comp		Unaffected					term availability	Books and reference sheets will be placed on all unit
MicroVedex		Unaffected					term availability	Books and reference sheets will be placed on all unit
Secure email		Unaffected						
EM		Unaffected					and fax	Create a word template with information and fax
Computer Assisted Coding		Unaffected					No Workaround	No Workaround
Scanning		Unaffected					Contact HIM if scanned documents.	Scan after the system returns
Esken Deliveryware/CHS Fax		Unaffected					will be seen when email is back up	Need to establish
Transcription System		Unaffected					Hand written notes	Hand written notes
Outlook		Unaffected					None	None
Intellbridge (Biomed)								
NeoFax		Unaffected					term availability	Books and reference sheets will be placed on all unit

# Timeline and Impact List

SYSTEM NAMES		Description	SYSTEM CONTACT	0-15	16-30	31-59	1-2 hr	2-3 hrs	3-4 hrs	4-5 hrs	<5hrs

⊘ Data Warehouse	✓ Network drives (P:,J:,S:)	● SharePoint
● Email	⊘ Nurse Call	⊘ Safety Event Reporting System (SERS)
✓ Enterprise Faxing	● Paging	
✓ Available, no impact	● Intermittent or partial impact	⊘ Unavailable during maintenance

The following applications will be unavailable or not receiving data updates during this time:

Application

Reduced Availability

# Process to go to Paper

- AOD makes the final decision to go to paper (under guidance from CEI, ISD)
  - Goal is to make a decision within one hour of disruption
- Information is sent to users with the downtime pin
  - Communications sent to phones, email, pagers with downtime pin
  - RICOH Printers used for printing

# Lessons Learned: Resources and Assets

## Themes:

- Downtime Forms
- Lab resource/asset needs
- Pharmacy needs

# Documentation and Information Management

## Issues

### Staff inexperience with paper documentation

- Old documentation forms being used
- Delays in billing due to coding
- Documentation from downtime had many compliance issues (i.e. missing dates, times and/or signature, etc.)
- Potential for duplicate documentation

## Solutions

### Revised/standardized downtime paperwork

- Prepared an annual downtime education for all clinical staff
- Outdated form removal

# Focused Education

- How to use a paper flow sheet and paper Medication Administration Record (MAR)
- Prescriber guidelines for an EHR downtime
- Ordering during downtime
  - Essential components of an order
  - Prescriptions during downtime
  - Order re-entry during downtime recovery
- Documentation during downtime and recovery

# Creating a Downtime Binder

- Prescriber Order Forms
- Medication Administration Record (MAR)
- Nursing Admission Assessment (NAA)
- Progress Notes
- Inpatient and Critical Care Flow Sheet
- Management Plans
- Blood Bank Requisition and Lab Order Sheet
- Discharge Plan, Summary, and Additional Instructions
- Documentation policies
- Sample orders
- Sample Prescriptions (including DME)
- Reminder to use downtime order sets
- Directions for documentation of medications
- Guidelines for completing requisitions
- Area downtime preparedness checklist
- Medication History form

# Version Control

Use of an internal website with instructions/documents.

- Acts as the single source of truth
- Command Center can update in real time
- Available to address immediate staff questions
- All communication refers to this website
- Contact information included

The screenshot shows a website page with a navigation bar at the top containing links for 'Policies & Tools', 'Clinical', 'Nursing', 'Research', and 'About Us'. The main heading is 'Downtime Procedures'. Below the heading is an 'Important Note' stating: 'Make sure that all documentation includes a signature, date and time, and includes your name printed legibly.' There is a table with four columns: 'Orders/ Labs', 'Nursing / Ambulatory', 'Pharmacy/Pyxis', and 'Nutrition/ Food Services'. The 'Orders' section contains several bullet points: 'Orders are to be written on paper Order Sheets (Sample paper Order Sheet), reviewing as needed, the PowerChart Orders (active only) that are printed prior to downtime.', 'Nursing transcribes Orders to Downtime MAR and paper Management Plan. Orders are verified by two RNs prior to implementation, except in emergency situations and in specific care environments (ED and OR).', 'Scan medication/IV orders to Pharmacy; note allergy changes for Pharmacy.', and 'Use Paper Requisitions for Labs, blood bank, Diagnostic tests/procedures.' The 'Labs' section contains three bullet points: 'Out-patient: Patient comes with a requisition and EPIC labels are printed based on the number of tubes needed. Labels are attached to the requisition ready to be drawn.', 'In-patient: Requisitions are placed in the phlebotomy box and/or inside the designated folder depending on the floor workflow with EPIC labels already printed.', and 'At least 2 positive identifiers should be on the label. If EPIC labels are printed this already includes MR#, full name and...'. On the right side, there are 'Quick Links' and 'Nursing Quick Links' sections with various links like 'Ordersets/PowerPlans', 'Downtime Forms', 'Patient Documentation Policy', etc.

# Laboratory Medicine

## Issues

Decreased productivity/throughput

---

- Variability/errors/ambiguity in paper requisitions
- Increased turnaround time for test results
- Inability to ensure prompt receipt of results to providers

## Solutions

Updated downtime process

---

- Collected and phased out old paper requisitions
- Created new, simplified paper requisitions
- Standardized process for delivery of lab results during downtime

# Lab Solutions

- Limited menu of lab orders created during a downtime
- Formalize support agreements from neighboring institutions to help process labs

# Pharmacy Operations

## Issues

Delays in Medication orders and delivery

---

- Lack of medication tracking
- Medication safety
- Staff overworked and exhausted

## Solutions

Review and increase resource utilization

---

- Established dedicated phone line for stat orders and requests
- Revised medication request process
- Increased number of fax machines
- Created an electronic database to track new order entries, refills and label generation

# Prescription Pads

- Process created to distribute pads
- Information on how prescribers can fill out prescription pads.

# Lessons Learned: Staffing

- More staff needed
  - In many different departments
  - For a multitude of tasks
  - In all phases of response

**...There's an App for that**

# Hospital Emergency Labor Pool

When activated the “HELP” application can query staff availability for multiple operational shifts.

The screenshot displays the user interface for the HELP application at Boston Children's Hospital. The header includes the hospital logo and the tagline "Until every child is well". Navigation tabs include "Admin", "Operator", "My Events", and "Personal Information". The main content area is titled "Active Events" and shows a list of events: "test 10", "Sunny Day", and "Electrical Fail". The "Electrical Fail" event is selected, showing the following details:

- Event Name:** Electrical Failure - Fegan
- Event Location:**
- Event Start Date:** 4/14/2016
- Notification Time:** 4/15/2016 8:57:49 AM

The notification content is displayed in three sections:

- Email Content:** Subject: This is a test. Email Content: We need your help! Boston Children's Hospital has activated its Hospital Emergency Labor Pool (HELP) in response to the electrical failure. Our HELP volunteers are needed to join the response.
- SMS(Text) Content:** HELP Volunteers needed! Please respond via email if available.
- Pager Content:** HELP Volunteers needed-pls check email.

A "Close" button is located at the bottom of the notification window. The status bar at the bottom left of the window reads "HELP - Hospital Emer".

# Lessons Learned: Communication

**Boston Children's Hospital**  
Until every child is well™

**HARVARD MEDICAL SCHOOL**  
TEACHING HOSPITAL

# Communication Feedback

After surveying hospital staff after a 5 day downtime communication was the **number one opportunity for improvement.**

Feedback included:

- Need for increased frequency of communication
- Stronger leadership presence during long term activations
- Visible leadership on the floors
- More transparency and coordination within messaging

# Communication Insights

- **Employee heroics vs system capabilities:**  
Cumulative system and human stressors
- **Marshalling Senior Clinical Leadership Committee** guidance early and often
- **Making capacity management decisions** – balancing safety, quality, access, and employee considerations
- **Internal and external communication** – media, employees, and patients & families
  - Creation of an emergency family education sheet to distribute during an emergency.

# Action Items

Risk  
Communication  
training given to  
incident  
commanders.

Response tools  
compiled of  
methods to  
communicate with  
staff

Ensure frequency of  
updates to all staff

Regular updates to  
senior leadership

Facilitate regular  
communication with  
IT response and  
HICS Command  
Center

Better ways to  
facilitate “town hall”  
meetings to reach  
large amounts of  
staff

# Shift to High Reliability

- A cultural shift to focus on error prevention, transparency, and situational awareness
- 5 Principles:
  - Preoccupation with failure
  - Reluctance to simplify interpretations
  - Sensitivity to operations
  - Commitment to resilience
  - Communication at all levels

Goal: zero serious events of preventable harm

An enterprise-wide commitment to doing things right the first time,  
every time

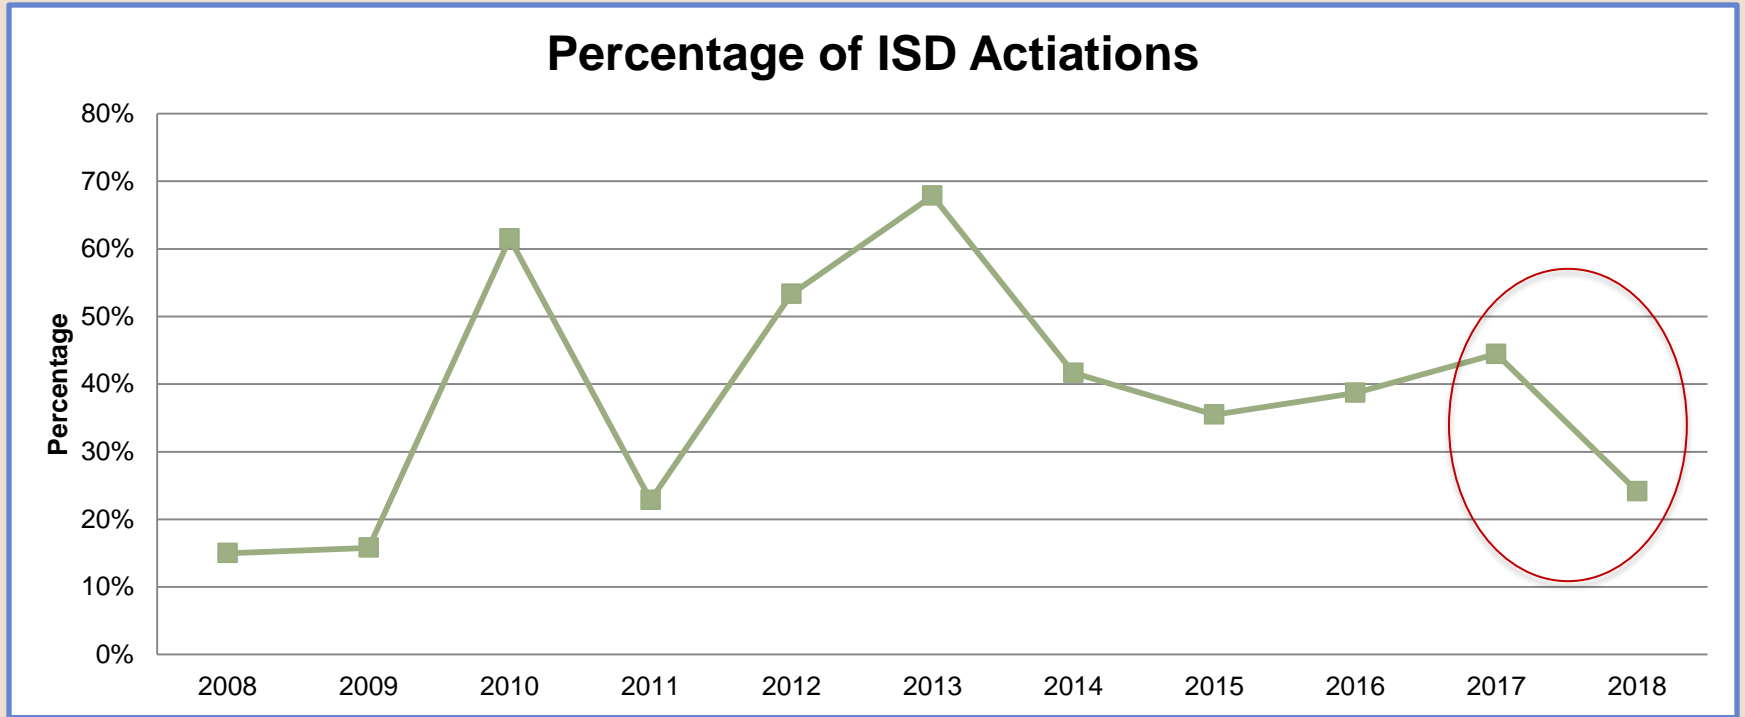

# System Resiliency

Move to Remote Hosting!
